

Right Click A menu of services to support your Data Visualization implementation.

Where is all the best stuff on the applications you use every day? In most cases, it's on the right-click menu. Application developers put their most useful features there, so you can get to them quickly and easily. Archipelago is now offering its own "Right Click" menu of services!

Archipelago's "Right Click" provides a menu of services from which you can easily select just what you need to support your data visualization implementation. Providing training options, add-ons, development assistance, all the way up to managed services, Right Click gives you what you need within the context of your organization's use of data visualization tools. The best part – all services are easily delivered to your organization through one trusted partner, Archipelago!

Right Click Onshore/Offshore Development:

The powerful new visualization and discovery capabilities that today's data visualization tools bring to your organization can quickly overwhelm the in-house development resources - as demand for new analytics capabilities outstrip supply. Right Click Onshore/Offshore Development allows you to keep pace with your business requirements by dynamically scaling up your development resources, as needed.

Archipelago ensures you have a trouble-free outsourcing experience. We complement each project with oversight from Archipelago's own senior architect and project manager. This approach guarantees there will be no communication barriers, we'll meet all your expectations, and you'll receive the highest quality applications.

Here's a sample of what a Right Click Onshore/Offshore Development team may look like:

Senior Architect

- Leads discussions during Planning, Requirements Gathering Phases
- Provides architectural guidance on application design and development
- Conducts peer review
- Leads Customer Review and Data Validation Exercises

Project Manager

- Project Planning
- Project Kickoff/Close Out
- Meeting schedules
- Archipelago/Client communication
- Escalation point of contact

Senior Developer(s)

- Extensive experience in application development (back/front end)
- Experienced in SaaS applications integration

- Experienced in RDBMS/Flat File integrations

Right Click HealthCheck:

In some instances, organizations have deployed their data visualization tools organically without following specific quality processes or development methodologies. Over time and as usage scales, these organizations may now be experiencing inadequate levels of performance and aren't realizing all the benefits their tool could offer. That's where Archipelago's Right Click HealthCheck services come in handy.

With our Right Click HealthCheck services, we will conduct an onsite assessment to evaluate and document your current data visualization and business intelligence environment. We will then provide insights and vital recommendations that will highlight specific areas of improvement – guaranteed to give you instant relief with long-term value.

With Right Click HealthCheck, here's a sample of the areas we'll review:

- Architecture and Scalability
- Usage and Performance
- User Adoption and Satisfaction
- Licensing and Security
- Quality Standards
- Development, Strategy, Practices, and Methodology
- Scripting, Data Flow, and Reload Process
- Resource Performance and Gap Analysis

Right Click Training:

Effective training is essential for successful adoption of any new technology. Archipelago's Right Click Training gives you the tools you need to ensure your people have the skills and understanding necessary to get the most value out of your data visualization investment.

Traditional approaches to training typically take one of two approaches:

1. Expensive, standard, vendor-supplied training, or
2. Costly and time-consuming development of in-house training materials

But, with Right Click, Archipelago gives you valuable and affordable options, including:

- Unlimited internal use of training templates developed by industry leaders
- Professional customization of these templates for your organization by Archipelago experts

Don't have a training department or expert facilitators on staff to deliver your courseware? No problem. We can deliver the training for you. Our trainers are not only skilled instructors; they

are also experts in an array of data visualization tools and have years of experience in designing and administering complete solutions. By choosing to have our trainers deliver the courses, you can be confident that your more advanced students will get all of their questions answered completely, every time!

Right Click Add-Ons:

Many organizations have specialized needs that go beyond the out-of-the-box capabilities of their data visualization tool. Now you can take your application and dashboards to new levels of effectiveness through Right Click Add-Ons! And, we fully support you from installation and configuration through training and development.

GeoQlik extends the visualization capabilities by adding advanced geospatial capabilities which support geographically based visualizations and discovery. GeoQlik helps you take your QlikView analysis to the streets with advanced cartographic integration.

BI Network lets you leverage your QlikView visualizations and discovery work and integrate it with more traditional information presentations to help you ensure consistency in your management information, regardless of the medium used. Simplify report verification and consistency by using the same QlikView foundation for all of your analytics and reporting.

Right Click as a Service:

When it comes to staffing, we'd all like to have resources who are characterized by professionalism and competence and who have amassed years of relevant experience. Unfortunately, those resources can be hard to find and even harder to afford! But with Archipelago's Right Click as a Service, you can have the best of both worlds – top-tier talent at part-time prices!

We can provide system administration support, part-time development, and architectural oversight and advisory services. For instance, maybe you need an expert to review dashboard development work done by internal employees; or troubleshoot services such as dashboard or mobile device performance issues; or assist in adding dashboards to an access point or adding new users to your secure access. We are here to help you with any managed service, professional service, or advisory service you may stumble upon.

With Archipelago, you get the consistency of a resource who knows your environment and your requirements, but without the huge cost that can accompany keeping such a person on staff full-time.
